(54) APPLICATION SHARING PALETTE MANAGEMENT METHOD AND DEVICE FOR COOPERATION SYSTEM

(57)Abstract:

PURPOSE: To provide a palette management method/device in a cooperation system.

CONSTITUTION: The change recognized in a system palette of a host computer is reported to a remote computer. Then a logical palette is generated at the remote computer owing to reflection of the system palette of the host computer. Both logical and system palettes of the remote computer are changed according to whether a cooperation system is active or idle. When an image is shared between the host and remote computers, the image is first translated into a device-independent image from a device-dependent format via the system palette of the host computer. The device-independent image is sent to the remote computer from the host computer. Then the device-independent image is translated into a device-dependent image that is suitably displayed on the remote computer.
